

Cover Letter - Dastyab Launchpad Summer Internship Program 2026

Dear Dastyab Launchpad Team,

I am writing to apply for the Dastyab Launchpad Summer Internship Program 2026, specifically the Technology & Product track. I am a Computer Science student at FAST National University, Karachi, with hands-on experience in Python, machine learning, NLP, deep learning, data analysis, and full-stack web development.

Through my projects, I have built practical systems that combine AI concepts with usable software. My UEBA Anomaly Detection System involved building a deep learning pipeline in Python using TensorFlow, Keras, and Pandas to detect anomalous user behavior from event logs. I also developed an AI Data Chat System that allows users to query CSV datasets in plain English by mapping user intent to Pandas operations. These projects strengthened my understanding of machine learning workflows, data preprocessing, model evaluation, and building tools that solve real problems.

Alongside AI/ML work, I have experience with full-stack development through MERN stack projects, REST APIs, authentication, and role-based access control. This mix of machine learning and product-oriented development makes me especially interested in Dastyab's hands-on internship model, where I can contribute to technical projects while learning from industry professionals.

I would be excited to join the program, work on real product and technology challenges, and grow through mentorship during the six-week internship. Thank you for considering my application.

Sincerely,

Taha Ahmed
